## The Problem

Air handlers and drip pans are often forgot about and/or neglected area in a facility. They are hidden and usually the last thing that anyone sees unless changing the filters. This results in problems such as **leaky side walls and drip pans, corroded metals, damage to key space below, and microbial contamination issues.**

## The BMI Solution

With as little as 6 hours of down time, BMI can install our Liquid Membrane System to your units creating a seamless liner and you are **back in service the same day.** Major Benefits are its adhesion characteristics (350 psi), permeability rating (.03) and its expansion and contraction properties (400%).

Quick Quotes • Fast Friendly Response • Personalized Solutions

## Results You Can Reply On:

- Save on costly replacement of drip pans/ side walls • Stop corrosion • Non-microbial
- Increase proper air flow • Complies with the toughest VOE regulations
- Fast turnaround with limited down time
